

BRAIN INJURY REHABILITATION

TREATMENT AND RECOVERY

The Brain Injury Program at New England Rehabilitation Hospital provides comprehensive medical and rehabilitation services to those who have sustained an acquired brain injury (BI). The team provides progressive care in a concerted effort to optimize outcomes for BI patients throughout the spectrum of injury severity. New England Rehabilitation Hospital offers a seamless transition from acute hospitalization through inpatient and outpatient rehabilitation to home. Encapsulating a number of specialized protocols, clinics, and services, the BI program facilitates the functional skill development necessary for attainment of maximal functional independence.

“Evidence demonstrates that the organization of rehabilitation, intensity of services, and choices of interventions impact patient outcomes.”

Faxon DP, et al. “Improving Quality through Disease Management.”
