

SPINAL CORD REHABILITATION

TREATMENT AND RECOVERY

The Spinal Cord Injury (SCI) Rehabilitation Program at Braintree and New England Rehabilitation Hospitals is dedicated to the care of persons with spinal cord injuries and other paralyzing spinal disorders. We offer the professional, technical, and clinical resources necessary to provide individualized treatment and promote progress toward an independent lifestyle.

The program is led by a board-certified physiatrist and offers a seamless transition from acute hospitalization through inpatient and outpatient rehabilitation to home.
